

I am aware that with microneedling, skin-related improvements, with scarring, wrinkles, and acne scars, might need from 2 to 8 treatments to reach maximum effects

Post-treatment care

- I understand that I need to avoid direct exposure to the sun at least 14 days post-treatment.
- I understand that I cannot apply cosmetic products on the skin for a minimum of 12 hours post-treatment.

I have been informed that after microneedling, the following signs and symptoms could appear

- Swelling, pain, redness, and tenderness of the skin
- These signs typically resolve spontaneously within 1-2 days after the treatment.

Persistence of inflammatory reactions for more than 3-4 days is to be signaled to the practitioner for immediate treatment, if needed.

I have answered the questions regarding my medical history to the best of my knowledge.

I understand the importance of the post-microneedling care and I will follow the recommendations as strictly as possible.

I have read the above and understand it. My questions have been answered satisfactorily by the nurse. I accept the risks and complications of the procedure and consent to the treatments of microneedling.
